

IDEATION PHASE

Brainstorming – Idea Generation

Project Title

SLA Breach Awareness and Justification System

Objective

The objective of the brainstorming session was to identify the challenges organizations face in managing Service Level Agreements (SLAs), especially SLA breaches, and to develop a ServiceNow-based solution that provides timely breach awareness, automated notifications, and mandatory breach justification to improve service quality and accountability.

Idea Generation

During the brainstorming process, the team identified several issues in SLA management. Organizations often fail to monitor SLA deadlines effectively, resulting in delayed incident resolution, missed SLAs, poor customer satisfaction, and lack of accountability. In many cases, SLA breaches occur without proper justification or management visibility.

To overcome these challenges, the team proposed developing an SLA Breach Awareness and Justification System in ServiceNow. The system will automatically monitor SLA status, alert support teams before a breach occurs, notify managers when an SLA is breached, and require agents to provide a justification for every SLA breach.

Selected Idea

The selected project idea is **SLA Breach Awareness and Justification System**.

This solution provides:

- Real-time SLA monitoring.
- SLA breach alerts and notifications.
- Mandatory breach justification.
- Automated workflows using Flow Designer.
- Manager visibility into SLA performance.
- Reduced SLA violations.
- Improved accountability and service quality.

Expected Benefits

- Improved SLA compliance.
- Faster incident resolution.
- Reduced SLA breaches.
- Better customer satisfaction.
- Increased accountability.

- Improved reporting and auditing.

Conclusion

The brainstorming session concluded that implementing an SLA Breach Awareness and Justification System in ServiceNow will improve SLA tracking, reduce missed deadlines, enhance transparency, and ensure every SLA breach is properly justified and reviewed.

Define Problem Statements

Problem Statement

Organizations often face challenges in effectively monitoring and managing Service Level Agreements (SLAs). As the number of incidents and service requests increases, tracking SLA deadlines manually becomes difficult, leading to frequent SLA breaches and delayed issue resolution.

Some common problems include:

- Lack of real-time SLA monitoring.
- Delayed awareness of upcoming SLA breaches.
- Missed incident resolution deadlines.
- No mandatory justification for SLA breaches.
- Limited visibility for managers into SLA performance.
- Manual tracking increases errors and workload.
- Poor customer satisfaction due to delayed services.
- Difficulty in identifying the root causes of SLA breaches.

These issues reduce operational efficiency, affect service quality, and make it difficult to maintain SLA compliance.

Proposed Solution

To address these challenges, a **ServiceNow-based SLA Breach Awareness and Justification System** is proposed. The system continuously monitors SLAs, sends alerts before breaches occur, notifies managers when breaches happen, and requires support agents to provide a mandatory justification for every SLA breach.

The proposed system provides:

- Real-time SLA monitoring.
- Automated SLA breach notifications.
- Mandatory breach justification.
- Workflow automation using Flow Designer.
- Manager dashboards and reporting.
- Reduced manual effort.
- Improved SLA compliance and accountability.

Objectives

- Monitor SLA status in real time.
- Reduce SLA breaches through proactive alerts.
- Ensure every SLA breach has a valid justification.
- Improve incident resolution within SLA timelines.
- Increase accountability and transparency.

- Enhance customer satisfaction and operational efficiency.

Expected Outcome

The implemented solution will improve SLA compliance, reduce missed deadlines, increase accountability through breach justifications, and provide better visibility into SLA performance, resulting in improved service quality and customer satisfaction.

Empathy Map Canvas

User Persona

Service Desk Agent / Incident Manager

Says

- "I need to resolve incidents before the SLA deadline."
- "I want to receive alerts before an SLA breach occurs."
- "Providing SLA breach justifications should be simple and quick."
- "I need better visibility into SLA performance."

Thinks

- Manual SLA tracking is time-consuming and error-prone.
- Early notifications can help prevent SLA breaches.
- Every SLA breach should have a valid reason.
- Automated workflows will improve efficiency and accountability.

Does

- Monitors incident tickets and SLA status.
- Resolves incidents within SLA timelines.
- Responds to SLA warning notifications.
- Provides justification when an SLA breach occurs.
- Updates incident records and communicates with users.
- Reviews SLA reports and performance metrics.

Feels

- Stressed when multiple incidents are close to SLA deadlines.
- Concerned about SLA breaches affecting team performance.
- Frustrated with manual monitoring and repetitive tasks.
- Satisfied when incidents are resolved within SLA and breaches are properly documented.

Pains

- Frequent SLA breaches due to delayed monitoring.
- Lack of timely SLA alerts.
- Manual effort required to track SLA deadlines.
- Missing or inconsistent breach justifications.
- Limited visibility into SLA performance.

Gains

- Real-time SLA monitoring.
- Automated SLA warning and breach notifications.
- Mandatory and standardized SLA breach justification.
- Improved SLA compliance.
- Reduced manual effort.
- Better reporting, accountability, and customer satisfaction.

Conclusion

The empathy map highlights the needs and challenges of Service Desk Agents and Incident Managers responsible for meeting SLA commitments. The proposed SLA Breach Awareness and Justification System addresses these challenges through automated SLA monitoring, timely notifications, mandatory breach justifications, and workflow automation, resulting in improved service quality, accountability, and operational efficiency.
